

ARPITA PATIL

Python Developer

☎ +91-6361239720 ✉ arpitapatil7676@gmail.com [in LinkedIn](#) [GitHub](#)

Summary

Python Developer with a strong foundation in Generative AI, Python programming, and AI-assisted technologies. Experienced in developing Python-based solutions, writing efficient and maintainable code, and working with JavaScript, React for front-end and scripting tasks. Familiar with prompt engineering, AI model interactions, and evaluating AI-generated responses for quality and accuracy. Possesses strong communication, analytical thinking, and problem-solving skills, with a commitment to building reliable and scalable AI-powered applications.

Skills

Programming Languages: Python, JavaScript, React
Generative AI Skills: Prompt engineering, AI model interaction, AI output evaluation
AI Tools: ChatGPT, Google Gemini, Claude
Core Python Skills: Problem solving, scripting, basic data handling
Soft Skills: Communication, analytical thinking, attention to detail

Experience

Software Developer Intern

Aug 2025 – Apr 2026

Visvesvaraya Research & Innovation Foundation

Technologies: Python, HTML, CSS, JavaScript, React, MySQL

- Reviewed, validated, and maintained core application data, ensuring high data integrity and consistency across web-based systems.
- Conducted comprehensive quality assurance checks, system testing, and issue identification, which reduced application errors by 25% and enhanced process reliability.
- Managed data integration between frontend interfaces and backend databases, troubleshooting system bottlenecks to guarantee accurate outputs.
- Collaborated with cross-functional teams to analyze system metrics, resolve data discrepancies, and uphold strict operational quality standards.
- Contributed to process improvement initiatives by executing rigorous data verification, maintaining documentation, and monitoring workflows to boost overall efficiency.

Projects

Sentiment-Based E-Commerce Product Rating System | Python, React, MySQL | GitHub

Aug 2025 – Feb 2026

- Applied AI-driven sentiment analysis to over 100 customer reviews, increasing sentiment detection accuracy by 25%.
- Enhanced product rating reliability by 30% by categorizing customer feedback into positive, negative, and neutral sentiments across 50+ products.
- Automated review verification workflows, reducing manual overhead by 40% and accelerating review processing speeds by 2x.

Multi-Agent AI Research System | Python | GitHub

Feb 2026 – May 2026

- Engineered a Python-based multi-agent system to automate web searching, content extraction, and report generation, reducing research time per topic by 85% (from 2 hours to under 20 minutes).
- Aggregated and analyzed cross-platform data from 5+ online databases per query, achieving 100% automated report generation and LLM-based evaluation.
- Eliminated manual intervention by deploying end-to-end pipelines for structured research generation and quality assessments, boosting research throughput by 6x.

Awards & Certifications

- **Generative AI Certification – Simplilearn (2025):** Acquired fundamental knowledge of Generative AI, Large Language Models (LLMs), prompt engineering, and AI-powered applications.
- **Prompt Engineering for ChatGPT – Coursera (2025):** Gained practical experience in designing effective prompts, evaluating AI-generated responses, and enhancing output quality.

Education

Bachelor of Engineering in Computer Science and Engineering

2022–2026

Visvesvaraya Technological University (VTU), Belagavi

CGPA: 8.2/10
